

Don't Turn a Blind Eye to Glaucoma

World Glaucoma Day, 6th March 2008

Glaucoma is a group of diseases that damages the eye's optic nerve, which can lead to irreversible blindness. However, the majority are unaware of their condition until it is too late. Glaucoma can be treated with medication, laser or surgery. Hence, early detection of glaucoma is essential to the preservation of vision.

Find out more about glaucoma, it's possible prevention and the importance of regular eye examinations during the educational talks held in various languages at Alexandra Hospital and Jurong Medical Centre.

Eye screenings will be available at a nominal fee of \$5.00 for those aged 40 years and above, who are not currently under the care of an eye specialist.
